

Senior Project Overview

Name: Chandler Tiarney

Project description: This project involves the observatory up at WNC and we use the telescope to video and capture pictures of the event happening at that time.

How the project evolved: The working of a telescope and the use of a computer program to clear up the quality of that picture

Special things I would like the judges to consider: Clear pictures of planets and stars along with graphs showing the light of a star disappearing from a asteroid passing by.
